Customer service in an ultra-connected era

Consumer behavior is rapidly changing in today's always-on digital world. The proliferation of smart phones, social media, email, and high-tech availability means your customer is likely interacting with your brand on a number of different devices via a vast array of channels. But what your customers seek is a seamless brand experience across all channels so their questions get answered and issues get resolved—quickly and with unprecedented ease.

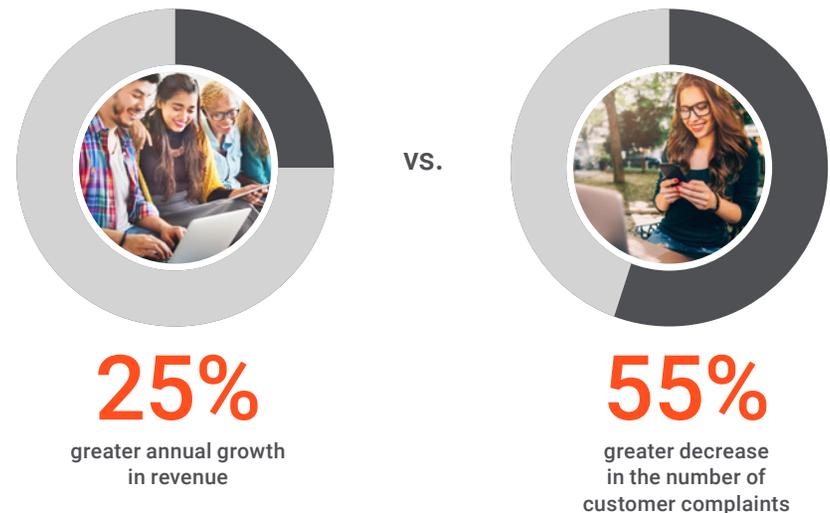

The key is to eliminate internal silos so that all customer interactions are routed through a single engine. For customer contact centers, an omnichannel experience is one that stores records of calls, email, web interactions, social media information, and all the rich data and notes associated with them—in a single system so that customer concerns can be addressed faster and more consistently, regardless of preferred channel of engagement.

By creating real-time visibility into all interaction types—including digital and phone—call center agents and supervisors can create customer experiences that are streamlined, simple, fully informed, and effective. You can ensure customers are recognized regardless of their initial contact channel and anticipate that customers may begin in one channel and move to another as they progress to a resolution. You also can deploy technologies to make the transition between channels as convenient and enjoyable as possible.

“An Accenture report on retail hyper-personalization found that “55% of consumers desire personalized experiences through every engagement channel—tailored to their needs and preferences.”

The channel explosion

Small- and mid-sized contact centers often find it challenging to meet customers' rising expectations for consistent and effective cross-channel service. With digital, voice, and online channels available to consumers 24/7, it's critical for contact center customer service providers to master omni-channel service to create a seamless, informed experience—no matter how the customer chooses to interact with you.

If businesses offer customers multiple ways to get in touch with them but don't have those channels seamlessly connected, customers often walk away disappointed by a fragmented and confusing brand experience. And disappointed customers result in big potential losses for businesses that struggle to navigate the new omnichannel world.

“More than half of U.S. online adults will abandon their online purchase if they can not find a quick answer to their questions.”

Meet your customers where they are

Although today's customers interact with your brand through a variety of channels, they want one thing from you: a consistent experience.

Savvy customers expect that you will meet them where they are; when they need you; and with the highest quality, informed service. So how do you make that happen? Provide your contact center agents and supervisors with omnichannel customer information—including interaction history—so the service you deliver is contextual and consistent.

- Centrally stored and accessible omnichannel data lets your team:
- Deliver personalized service based on interaction history.
- Encourage customers to use their preferred channel.
- Easily adapt to customers' ever-changing channel preferences.
- Enable faster response times.
- Create a seamless transition among channels and avoid the negative experience of customers having to repeat information.

Create the omnichannel experience

Leading customer engagement solutions in the contact center industry enable you to seamlessly blend all customer communications channel data—including voice and digital—using consistent routing rules, unified reporting, and real-time visibility into omnichannel performance.

By integrating these solutions with your CRM system, you can enable truly personalized cross-channel interactions driven by informed service representatives. In most cases, a single platform solution also reduces your overall technology investment and helps eliminate the confusion of siloed customer information.

- Creating a seamless omnichannel customer experience requires these three essential steps:
- Map your customer’s cross-channel journey.
- Provide agents and supervisors full visibility into prior cross-channel interactions.
- Define channel-specific business goals, including measurements of success and desired outcomes.

“It’s no longer enough to provide isolated channels; consumers want an omnichannel experience that uses different media to complete what may be a single inquiry. These interactions need to be frictionless.”
